

Yield UK – Annual maintenance programme extends reliability

Located in Widnes between Liverpool and Manchester, Yield UK provides specialist Recycling and Waste Management services, including security shredding and product destruction, to a range of public and private sector organisations – supporting clients in their legal and commercial responsibilities for minimising waste to landfill.

The company sorts and bales between 500 and 600 tonnes of waste material per week, enough to fill 12 to 15 container loads. This includes cardboard, plastic bottles and film, HDPE, polypropylene and shredded paper, all of which is then shipped on for recycling. Core to the operation are two Presona balers, supplied and serviced by Middleton Engineering.

With both increasing competition in the sector and pressure to divert more and more from landfill, reliability is a crucial factor for Yield UK. This ensures that the team can service client contracts smoothly and schedule new work with confidence.

The machines are worked hard, five days a week, and an annual maintenance contract involving regular inspection and service visits, ensures they are always running at their best with few surprises. A good investment according to Phil Brown Operations Manager, Yield UK who explains that unexpected downtime would very quickly impact operations and that client contracts would suffer.

Benefits

- Annual service contract minimises breakdowns and provides peace of mind
- Telephone support quickly resolves 90% of faults
- Fast response and expert service
- Annual service contract enables better budgeting, as costs can be spread evenly over the financial year and ensures no sudden, unexpected repair bills

“The baling operation is a crucial element of our business and in the five years we’ve been working with Middleton Engineering we’ve had no unexpected breakdowns. Service is fast and efficient when we need it and issues are resolved fast. Telephone support in particular has been very useful and they have the expertise to talk us through and resolve 90% of the issues we experience, which in turn means downtime has been significantly reduced. At the end of the day it means we can concentrate on servicing our client contracts and expanding the business with the peace of mind that we can plan and schedule work with confidence.”
